Strong fit — candidate's hands-on BPMN, Lean Six Sigma, multi-site process improvement, and stakeholder engagement experience at Stellantis and Greiner maps directly to every core JD requirement at the right seniority level.

STRENGTHS

✓

BPMN 2.0 & process mapping: delivered end-to-end BPMN documentation across 4 plants (Austria, Mexico, Romania, Czech Republic) at Greiner Packaging, including remote stakeholder interviews and Lean Digital/Muda analysis — directly matches the primary JD responsibility.

✓

Multi-site process improvement in large complex organisations: Stellantis (global EVSE database, 20+ markets, 400+ brands) and AB InBev (5 external warehouses, 4 provinces, 80% national

maps to KPI and insight responsibilities.

✓

Lean Six Sigma certification (Green Belt, Nov 2025) plus applied DMAIC, VSM, 5S, and RCA in live programmes — directly satisfies the 'nice to have' certifications and reinforces analytical problem-solving credibility.

GAPS

~

No evidence of formal process mining platform experience (e.g. Celonis, UiPath Process Mining) listed as a nice-to-have in the JD.

~

Change management is listed as a required skill and appears in the skills inventory, but specific evidence of leading a structured change management workstream (stakeholder impact assessment, adoption plans, resistance handling) is not explicitly detailed in the experience narrative.

~

No formal people or budget management experience noted by the candidate; mid-level roles increasingly expect some accountability for junior analysts or project budgets within transformation programmes.

FIT OVERVIEW

Tatiana's experience maps directly to every core JD requirement at the right seniority level. At Greiner Packaging she delivered end-to-end BPMN documentation across four plants in Austria, Mexico, Romania and Czech Republic, conducting seven or more remote stakeholder interviews and applying Lean Digital and Muda analysis to produce a formal improvement report for leadership, which directly mirrors the primary JD responsibilities around BPMN 2.0, process mapping, and requirements gathering. At Stellantis she built a KPI tracking and Power BI reporting solution for three remanufacturing lines within two months, assessed ML applicability across multiple use cases and delivered a formal written recommendation grounded in data analysis, evidencing both the analytical problem-solving and KPI definition requirements. Her AB InBev experience demonstrates sustained operation inside a genuinely large, complex multi-site environment, including owning a national occupancy and logistics operation across five external warehouses and four provinces, automating reporting using SAP, QlikSense and UiPath, and independently building a financial model that changed an investment decision. Lean Six Sigma Green Belt certification obtained November 2025 alongside applied DMAIC, VSM and RCA in live programmes directly satisfies the Lean and Six Sigma nice-to-haves and reinforces analytical credibility. Stakeholder engagement breadth is strong, spanning manufacturing and maintenance directors at Greiner and regional teams across India, USA and Brazil at Stellantis.

There are no hard gaps: Tatiana holds a relevant engineering degree and meets the qualification gate. All gaps are soft. First, no evidence of formal process mining platform experience such as Celonis or UiPath Process Mining is present in the profile, though this is a nice-to-have rather than a requirement. Second, change management appears in the skills inventory but no bullet explicitly describes leading a structured change management workstream with adoption planning or resistance handling; this is a required skill and the gap in evidencing it reduces confidence unless addressed in the CV. Third, there is no formal people or budget management experience, which is consistent with the mid-level seniority match but worth acknowledging if the role carries team leadership expectations. None of these gaps are disqualifying at this seniority level.

HEADLINE

Process Improvement Engineer with BPMN and Lean Six Sigma Expertise

Uses verbatim JD keywords 'process improvement' and 'BPMN' while 'Lean Six Sigma' directly addresses the nice-to-have certification. Stays within ten words, matches mid-level seniority and is fully justified by Greiner and Stellantis experience.

SUMMARY

Industrial and Mechanical Engineer with a Master's in Smart Manufacturing and four years of international experience mapping, analysing and improving end-to-end business processes across large, complex organisations. Delivered BPMN documentation and Lean Digital improvement programmes across four manufacturing plants at Greiner Packaging and built KPI tracking solutions for global operations at Stellantis, combining strong data analysis with direct stakeholder engagement up to director level. Lean Six Sigma Green Belt certified with hands-on DMAIC, VSM and RCA applied in live transformation programmes across multi-site and multi-market environments.

AREAS OF EXPERTISE

Business Process Analysis

BPMN 2.0 and Process Mapping

Lean Six Sigma and DMAIC

JD-matched skills lead the list: BPMN, process improvement, KPI, stakeholder engagement, data analysis, multi-site ops, change management. All are backed by specific bullets in the experience. SAP and ERP analysis is

Lean Six Sigma Green Belt and DMAIC

Business process analysis and improvement

KPI design and performance monitoring

Stakeholder engagement and requirements gathering

Data analysis and actionable insight generation

Change management and adoption planning

Multi-site and cross-functional process improvement

SAP and ERP process analysis

SUPPORTING EVIDENCE

Power BI and reporting automation

Value stream mapping and Muda analysis

Low-code solution design with Power Apps and Power Automate

SQL and Power Query for data structuring

Process documentation and standardisation

Python-based data extraction and analysis

DEPRIORITISE

AI and ML applicability assessment

Digital twin concepts

CNN, LSTM, U-Net, Mask R-CNN model knowledge

URScript and AutoCAD

n8n and Supabase

Cursor and Lovable development tools

REST API and OR-Tools route optimisation

FlexSim and Tecnomatix simulation

SUGGESTED ADDITIONS

Achievement

Add a timeline quantifier to the Greiner Packaging BPMN and digital transformation bullet. The source notes the maintenance app was delivered in half the planned timeline. Adding 'delivered within half the planned timeline' to the Power Apps bullet gives a concrete efficiency metric that strengthens the JD requirement around delivering improvement programmes.

Found in: Greiner Packaging: 'delivered half planned timeline'

Quantified delivery pace is directly relevant to demonstrating ability to operate in fast-changing environments and deliver under pressure, which is a JD must-have. This metric exists in the profile but is not present in any of the formatted bullets.

Networking Function

The screenshot shows a LinkedIn profile for Natalia Dibbern, a Senior Software Engineer at Google. The profile includes a header with the LinkedIn logo and a search bar, a main section with the profile picture and name, and a sidebar with 'More profiles for you'. An extension panel titled 'DEV | Job tracker extension' is overlaid on the right side of the profile, displaying a form for tracking a contact.
